

# Acquired Brain Injury

## Education & Prevention Services

### Who Are We?

Our primary objectives are to promote, engage and support community efforts to reduce injuries; and enhance safety awareness through the provision of information and resources pertaining to brain function/brain injury and injury prevention.

### Contact Us About:

An interactive neuroscience presentation for students in grades 4-6. Students learn about different parts of the brain, basic neuroscience vocabulary, and how/why it's important to protect their brain and spinal cord. Information will assist student awareness of the brain and the spinal cord, and provide simple injury prevention strategies.

We work with your community to plan this dynamic, interactive injury prevention program for teens. The day simulates the difficult journey of an injury trauma patient, allowing students to follow the path of an injury victim. Sessions start at the incident and on to the transport, treatment, rehabilitation, and community reintegration phases. Interactive sessions are provided by local emergency, enforcement, health and other community-based professionals involved in trauma situations.

We work with your school/community to provide brain education that is easy to deliver and understand. Kindergarten to grade 6 students rotate through 10 interactive stations that teach brain function & how to keep brains safe & healthy.

We provide **Mild Brain Injury/Concussion** education, resources and presentations to educators, organizations & communities. Resources identify common symptoms of mild brain injury and strategies for recovery.

### Additional Priority Areas Include:

- Brain Function/Structure/Health & Wellness
- Helmet Usage
- Safe Road Usage (cycling, driving & pedestrian safety)
- Child Passenger Safety
- Off-Road Vehicle Safety (snowmobile and ATV safety)
- Falls Prevention
- Accessing Injury Prevention & Traffic Safety Grants
